

Welcome to Verilator

Welcome to learn Verilator

What you will build toward

- Glance at pass rate and coverage before sign-off
- Module ten is an offline build-and-run capstone; module eleven closes the loop

Two tracks, one idea

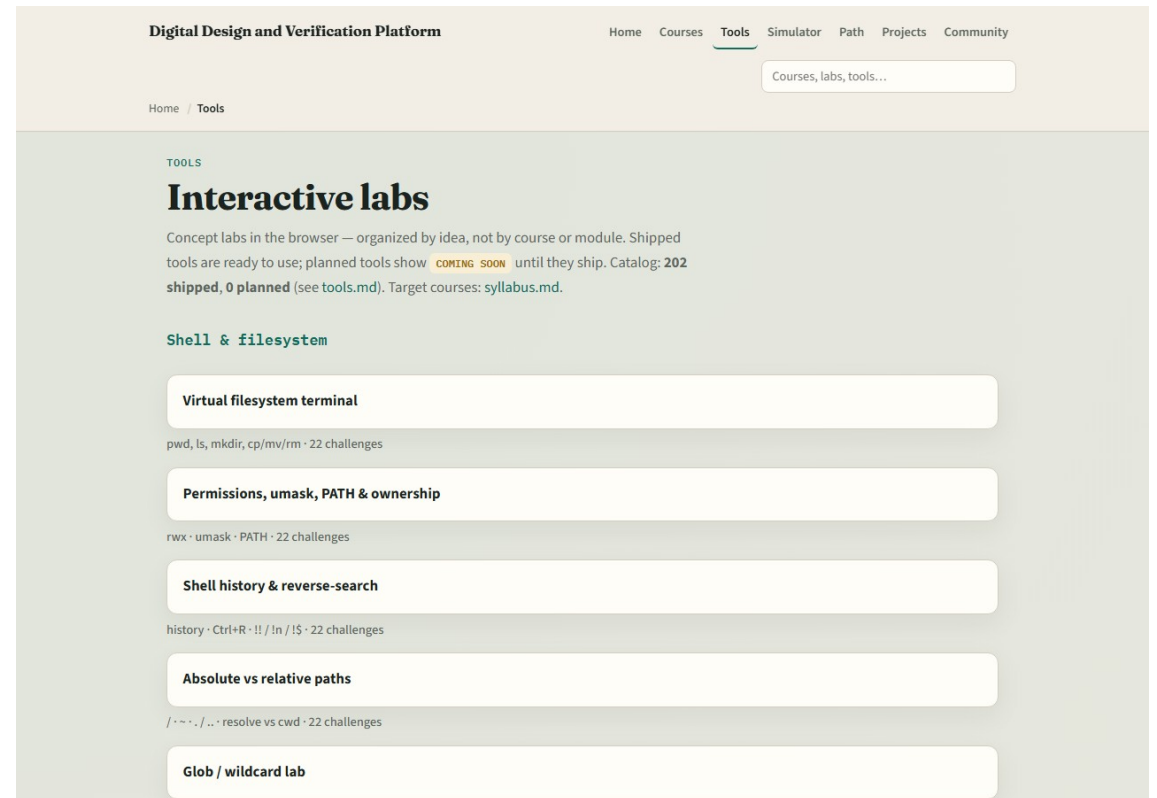

- Track A is real Verilator on your machine
- Metrics ideas
- You may do either track, or both
- A good rhythm is browser lab first for the vocabulary, then Track A for fidelity

Set up Track A

- Install Verilator and confirm the version command works in your shell
- Open this course folder and skim module READMEs and EXAMPLES prompts as you go
- When a module offers a self-check script, use it to grade checklist items
- Keep the sibling Icarus course in mind, you will compare the two tools early on

Set up Track B

- From the monorepo root
- All nine Verilator browser labs ship on the live site too
- Confirm you can reach the index

How to move through modules

- For each module
- Prefer Track B when you want graded challenges
- When you finish this intro checklist, continue to Icarus versus Verilator
